

Take the first step toward informed decisions for your patients and practice

POLAR is a **cloud-based clinical intelligence platform** that is designed to support **General Practices and their patients.**

POLAR supports General Practices with the tools to visualise and analyse patient data, enabling smart, insight driven decision making for your patients and your practice. Best of all it lives in the cloud, takes minutes to install and updates automatically, leaving your time free to spend on what's really important.

Insight

POLAR software helps you intuitively visualise and monitor key practice priorities and identify patient trends. Map and coordinate patient data to identify opportunities to provide the best care for your patients and make the right choices for your business.

Secure

Feel protected, knowing your data is private, with only de-identified data being stored outside your practice or shared with your PHN. All patient data is stored in our national data warehouse and securely hosted on local, fault-tolerant servers, which undergo regular enterprise level security audits.

Maximise your MBS Billing

POLAR gives your practice insight into current MBS billing and potential revenue. By identifying patient groups who are eligible for care planning, health assessments or a range of PHN based initiatives you can ensure you are billing appropriately and in the best interests of your patients.

Consistent

POLAR maps your uncoded free text and your diagnoses into SNOMED terminology and chronic disease groups, meaning less time hunting for your patient groups.

The POLAR platform helps you chart a better course for your practice with critical practice intelligence tools for GPs and practice managers

POLAR GP analytics software allows you to respond to your patient's needs through intuitive visualisation and monitoring of key practice priorities. Derive hidden insights for your patients and your practice all while optimising your business output.

Pinpoint specific patient cohorts for action, including screening and care coordination activities and support the growth of your practice, using your

existing MBS claiming trends to identify new or missed opportunities for claiming.

POLAR provides support at the point of care. Using the new WALRUS decision support tool, you can quickly view a number of clinical measurements for your patients when they need it, including risk calculation scores, clinical tracking and a range of MBS, data quality and My Health Record insights.

Contribute to better healthcare for everyone

Your clean and de-identified patient data can be aggregated with data from practices across your region by your PHN. Analysis of this data allows your PHN to make better informed funding and program decisions to support critical population health priorities.

Through our Aurora Research Platform, the latest evidence based data collated from your region also creates value to tomorrow's health initiatives by providing unparalleled access for cutting edge research.

Rest assured, your data is **not for sale**, and is only used with your permission.

De-identified
Data

Understanding your patients will help your practice

Whether you're looking to better understand the needs of the patients coming through your doors, looking to align your practice to quality improvement standards, or wanting to scale your practice for improved business output, practices are seeing a greater impact with POLAR.

“The ability for practices to audit their data and identify their personal areas for improvement is integral. POLAR stands above the rest to help ensure continuous quality improvement and improve patient outcomes.”
